Course Description: Existentialism is one of the most important and popular philosophical movements of the 19th and 20th centuries. In this course we shall read selections from the most prominent authors associated with this movement, including Tolstoy, Kierkegaard, Nietzsche, Heidegger, and Sartre. Students should be prepared to read twenty pages or so of challenging material every week. Student assessment will be based upon weekly reader response essays and class participation. Reader response essays are due noon the day before class; they should be submitted via e-mail to the address above. They should, in no more than one page, identify two passages that need to be discussed, and explain about each (a) why it seems particularly important and (b) why it is so unclear or confusing as to require discussion.

Bio: Andrew Norris is Professor of Political Science. He is the author of Becoming Who We Are: Politics and Practical Philosophy in the Work of Stanley Cavell (Oxford University Press, 2017) and more than thirty articles, most of which address topics in modern and contemporary political philosophy. - **Title:** Yoga: Theory, Practice, Culture
- **Instructor:** Roberto Strongman
- **Instructor Email:** rstrongman@ucsb.edu
- **Department:** Black Studies
- **Day - Time - Room:** Friday 1:00-2:50 in RGYM 1430

Course Description: Yoga is a Sanskrit term that can be best translated as "Integration." The course aims to develop an integral understanding of the history of yogic knowledges with roots in South Asia, creolization with XIX Century European body culture during the era of British imperialism, and a capitalist and often culturally-appropriative global spread in the late XX Century and beyond. This historical and philosophical material will be "yoked" (a cognate of "yoga") with a physical asana practice: the class will be organized in weekly two-hour
sessions, with the first hour devoted to lecture and discussion and the second hour to a physical postural and breathing practice thematically wedded to the readings. As such, the deeper, even metaphysical, goal of the course will be to bring "union" to the budding scholar, fomenting a balanced, equanimous and holistic body-mind.

In addition to my doctorate in Cultural Studies from UCSD Literature, I hold a 500 hour certification as a yoga instructor. **INT 84BH**

- **Title:** Twin paradox in relativity theory
- **Instructor:** Denis Labutin
- **Instructor Email:** labutin@math.ucsb.edu
- **Department:** Mathematics
- **Day - Time - Room:** Wednesday 4:00-5:50 in HSSB 1237
- **Enroll Code:** 64857

**Course Description:** In relativity theory the twin paradox is a thought experiment involving identical twins, one of whom makes a journey into space in a high-speed rocket and returns home to find that the twin who remained on Earth has aged faster. This time slow-down and many other counter-intuitive phenomena (length shortening, Doppler effect, ...) must occur as a consequence of Einstein's special relativity theory. Mathematical formalization and geometrization of the relativity was developed by Minkowski (Minkowski space-time). In the seminar we shall discuss these aspects of the special relativity theory since they require only the basic mathematical machinery. The plan is to see how physical intuition helps to understand mathematics behind it, and conversely how the mathematical formalism eliminates physical "paradoxes".

**Bio:** PhD 2000, Australian National University. Research interests include nonlinear partial differential equations and their applications.

- **Title:** Causes and Consequences of Sea-Level Rise: A Geologic Perspective
- **Instructor:** Alexander Simms

- **Title:** Mathematics of Origami
- **Instructor:** Jeff Stopple
- **Department:** Mathematics
- **Instructor Email:** stopple@ucsb.edu
- **Day - Time - Room:** Monday & Wednesday 8:00-8:50 in SH 1607
- **Enroll Code:** 64287

**Course Description:** Course Description: Origami is the ancient Japanese art of paper folding. One uncut square of paper can, in the hands of an origami artist, be folded into extraordinarily complicated and intricate shapes. The art of origami has been going through a renaissance over the past 30 years, with new designs being created at ever-increasing levels of complexity. It’s no coincidence that this rise in origami complexity has emerged at the same time scientists, mathematicians and origami artists have been discovering more and more of the mathematical rules that govern how paper folding works.

This course requires Linear Algebra Math 4A (or equivalent) as either prerequisite or concurrently enrolled.

Students in previous versions have said “Super fun and interesting!!” “The topic is very interesting, the discussion between students allowed for a lot of fun conversations, and the December 4, 2018 hands on activities were great.” “The class was hands-on and engaging. The format facilitated discussion on the topic and activity with other students and with the professor. It was satisfying to be able to finally successfully put together whatever we were working on. It was fun to team up with someone and use each other's strengths to accomplish the task.”
